

CubeDeploy

One Installer. Every Update. Zero Hassle.

Updating or commissioning AutoStore systems has meant installing multiple software packages in sequence. This leads to disjointed steps, risks, and opportunities for human error. This process consumes valuable time, disrupts operations, and increases the chance of version inconsistencies.

For integrators, it means longer deployments and slower customer handovers. For operations teams, it means more downtime and uncertainty in system stability.

Introducing CubeDeploy

CubeDeploy is the faster, safer, and more reliable way to commission and update AutoStore Cube Control Systems. By replacing multiple separate installers with one unified Windows-based installer, CubeDeploy streamlines commissioning, system updates, and service procedures so it cuts downtime and eliminates complexity for integrators, partners, and warehouse operations teams.

Features

- Unified Installer – All Cube Control System software components in one package.
- Windows-Based – Easy to deploy using familiar operating system tools.
- Validated Updates – Ensures consistency and reduces the chance of mismatched versions.
- Single-Step Execution – Run on the Controller during commissioning or upgrading.
- Time-Efficient Process – Reduces steps for integrators and operations teams.
- Supports All AutoStore Solutions – Compatible across different AutoStore configurations.

How We Deliver

- One Installer, All Components – Every software module for the Cube Control System is bundled into one Windows installer.
- Tested & Validated – Ensures every site runs the same configuration, minimizing the risk of operational errors.
- Time Savings – Fewer steps mean reduced installation time for integrators and less operational disruption for customers.
- Version Consistency – Eliminates inconsistency that can compromise performance.

Benefits

- Simplified process – One package, one procedure, no extra steps.
- Faster deployments – Commission or update systems in less time, freeing resources for higher-value tasks.
- Greater reliability – Standardized, validated updates ensure consistent performance across all AutoStore solutions.
- Predictable planning – Shorter, more reliable downtime windows.

With CubeDeploy, you can commission and update every AutoStore Cube Control System in a single, reliable step — cutting downtime, reducing risk, and keeping operations moving at peak performance.

Whether you're an AutoStore Partner delivering faster deployments or a Warehouse Operations Leader aiming to protect uptime, CubeDeploy gives you the confidence of a consistent, tested update every time.

Let the cube solve for you.
