

AutoCase™

**Unify Case and Each Picking
in One Grid**

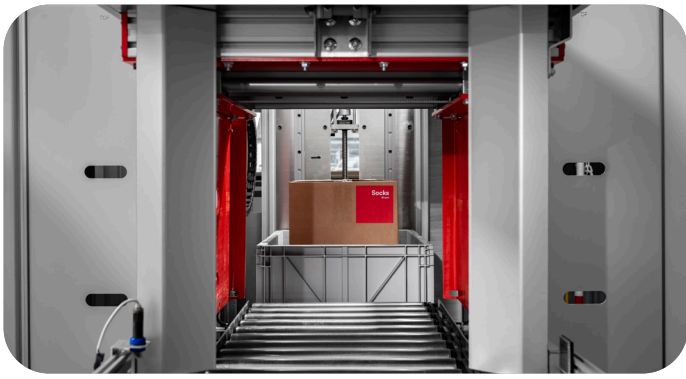

AutoCase™ brings case and each workflows together within AutoStore, reducing reliance on separate case-handling systems and manual processes.

With automated case induction, storage, retrieval, and sequencing, it expands the range of fulfillment activities that can run inside a single AutoStore solution.

One System. All Your Inventory.

AutoCase lets you store, retrieve, and sequence both cases and individual items in the same compact, modular system. With fully automated case induction and extraction, you eliminate manual lifting and carrying of heavy case loads, while dynamic Bin allocation ensures you maximize every inch of your warehouse.

Whether you are handling apparel launches, grocery peaks or high-volume retail replenishment, AutoCase helps bring more case and each workflows into one automated system.

Key Features & Benefits

- **Unified Grid:** Handle cases and eaches in one automated system, reducing reliance on separate case-handling technologies and workflows.
- **Automated Case Handling:** Automate case induction, storage and retrieval to reduce routine manual touchpoints.
- **Space Efficiency:** Store cases and eaches within the same compact Grid to make better use of available warehouse space, helping delay or avoid costly warehouse expansion.
- **Workflow Flexibility:** Support inbound case processing, case consolidation and buffering, and outbound case replenishment within the same Grid. A single task group can run across multiple AutoCase stations, helping cases move faster and maintain a continuous flow to packaging and palletizing.
- **Scalable & Future-Ready:** Modular design and intelligent software let you reconfigure and scale as your business evolves.
